Power supply	DC 12V
Contrast ratio	1000:1
Brightness	200 cd/m ²

IPS technology

Best range of colors among all the other technologies, the images are cleaner and sharper also to provide the best gaming experience.

Frequency

It refers to how many times per second the screen refreshes the image, the frequency is optimized to get all the information as fast as possible for the gamer.

Freesync

Technology available in your gaming monitor which allows your gaming monitor to communicate with the GPU and thus have smoother graphics.

Flicker free

Essential option implemented in the system to avoid screen flickers, protect your eyes from unbalanced luminosity.

Low blue light

Blue light has been lowered without altering image quality and colors, it helps protecting the users' eyes.

Vesa 75*75

Gain some space and flexibility thanks to the compatibility with VESA 75*75 mounts.

Drakkar gaming crosshair

You can add a crosshair in the middle of the screen thanks to our options, you can now easily snipe in your favorite FPS!

Response time

The time needed for one pixel color to change to another color, our 4 ms response time with an IPS panel is a great compromise between performance and image quality.
